- Malay
- Mandarin

SKILLS

- Project Management
- Teamwork
- Time Management
- Effective Communication

PROGRAMMING LANGUAGES

- Basic Python
- Basic HTML and CSS
- Basic C++
- Basic Java
- R
- SQL (Dbeaver and MongoDB)

TECHINICAL SKILL

- VS Code
- R Studio
- Dbeaver
- Tablue and Power BI
- Microsoft Office Suite

ABOUT ME

I am a Computer science graduate specializing in Data Science with a strong interest in data analytics. I have developed solid skills in data cleaning, data visualization, and exploratory data analysis through academic and hands-on projects. I am passionate about transforming raw data into meaningful insights that support data-driven decision-making. I am eager to contribute as a Data Analyst while continuously enhancing my analytical and technical skills.

EDUCATION

Foundation In Information Technology 2021 - 2022
Multimedia University - Cyberjaya

Foundation - **CGPA 3.92**
Dean's List recipient for multiple trimesters

Bachelor In Computer Science 2022 - 2025
Multimedia University - Cyberjaya

Degree - **CGPA 3.82**
Dean's List recipient for multiple trimesters

EXPERIENCE

Business Analysis Internship JUL 2024 - OCT 2024
Hong Leong Bank (PFS- Fixed Deposit)

Analyzed deposit and competitor rate data using Excel and Tableau to support promotional decisions, assisted in managing campaign updates, website content, and communication materials while coordinating with multiple departments to ensure smooth execution and compliance. This experience strengthened my skills in data analysis, communication, and project coordination within a banking environment.

PROJECTS

Talabia Chess
GitHub Link
Developed a 7×6 strategic two-player chess game with GUI using Java Swing. Implemented custom piece logic, board rotation, and save/load features.
Skills: Object-Oriented Programming, GUI Design, MVC Architecture, UML Diagramming.

Generative AI-Based Meal Recommender System
Github Link / DOI: https://doi.org/10.33093/jiwe.2025.4.2.20
Developed a generative AI system in Python using TensorFlow, implementing Variational Autoencoder (VAE) and VAE-GAN hybrid models to generate personalized, nutritionally balanced meal plans. Achieved an NDCG score of 0.963, demonstrating strong ranking accuracy, and integrated an interactive CustomTkinter GUI for real-time user input and meal recommendation display.
